

Congratulations on purchasing your DIY Haybutler!

### Contents (Based on DIY set with 4 locks)

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1x  | <b>Control Box</b> (incl. 2 wing nuts)<br><i>You should have received the operating instructions for the control box by email after placing your order. Ensure the back of the control box is protected from rain and direct sunlight.</i>                                                                                                                                                                                                                                                                                                                                                                       |
| 1x  | <b>Cover Plate</b> (incl. 4 screws)<br><i>The control box can be mounted onto the plate using the wing nuts.</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 4x  | <b>AA Batteries</b><br><i>We recommend using AA Energizer Industrial batteries for optimal performance. Other types may not provide sufficient power. Available in our webshop:</i><br><a href="https://paddocktweaks.nl/product/aa-batterijen/">https://paddocktweaks.nl/product/aa-batterijen/</a>                                                                                                                                                                                                                                                                                                             |
| 1x  | <b>Cable Set</b> (60, 80, 100 and 120 cm)<br><i>Extension cables can be ordered from our webshop:</i><br><a href="https://paddocktweaks.nl/product/verlengkabel-haybutler-diy-slot/">https://paddocktweaks.nl/product/verlengkabel-haybutler-diy-slot/</a>                                                                                                                                                                                                                                                                                                                                                       |
| 10x | <b>Tie-wraps and adhesive mounts</b><br><i>Thread the tie-wraps through the adhesive mounts. They stick well on smooth surfaces if properly degreased. On rough wood, it's better to screw them in place.</i>                                                                                                                                                                                                                                                                                                                                                                                                    |
| 4x  | <b>Lock (set)</b><br>This set includes: <ul style="list-style-type: none"> <li>- <b>Electronic Lock</b><br/> <i>Specially prepared for low power consumption and use in humid environments (e.g., condensation).<br/>               Can lift 20 kg or more with ease.</i></li> <li>- <b>Mounting Plate</b> (incl. 2 bolts and 2 screws)<br/> <i>Mount the lock on the plate to ease installation and prevent dirt from entering the lock.</i></li> <li>- <b>Lock Pin</b> (incl. 2 saddles and 4 screws)<br/> <i>The lock pin clicks securely into the lock and can be fastened using the saddles.</i></li> </ul> |

### What Do You Need to Build Yourself?

A cabinet with 4 shelves. We recommend making a sketch before starting. Example dimensions based on our standard freestanding Haybutler can be found on the next page.

### General Tips

1. You can open locks manually using the control panel or the latch on the side of the lock.
2. The included cables are numbered from shortest (1) to longest (4): 1 is the top lock, 4 is the bottom lock. The bottom lock (4) will open first when it's time for feeding.
3. The control box has numbers indicating where each cable should be connected.
4. Cable connectors can be stiff. Press the latch on the connector and gently wiggle it out when disconnecting.
5. If using a slanted plate to let the hay slide out, ensure the opening is large enough.
6. Do not stuff hay into the machine - compressed hay may expand when falling and get stuck.
7. If falling shelves are noisy, consider using our noise reduction kit:  
<https://paddocktweaks.nl/product/demperset-voor-haybutler/>  
 Simple furniture floor protectors can also help reduce noise.

Our standard freestanding Haybutler measures 60 cm wide and 50 cm deep:
